Professional summary

Ambitious and highly driven .NET FULLSTACK developer with a strong foundation in software engineering, clean architecture, and real-world problem solving.

I strive in environments where I build production style applications end to end, from database design and secure .NET APIs to modern React UIs and cloud deployment.

Combines technical education with extensive professional experience from automotive industry, including leadership and high-responsibility roles in complex production environments.

As former founder and CEO of company I held ultimate responsibility for all business operations end-to-end. Building and managing this business gave me strong business acumen, an intense customer focus, and a relentless execution mindset to use into software development.Experienced in building structured applications using C#, .NET, SQL, and modern development practices, with a clear focus on clean code, maintainable systems, and continuous improvement.

Known for exceptional discipline, leadership, and long-term commitment — I´m a big believer in personal growth both in my professional role and in my private life.

Technical Skills

Languages & Frameworks:
C#, .NET, ASP.NET Core, JavaScript

Backend & Architecture:
Object-Oriented Programming (OOP), SOLID, Clean Code, Layered Architecture, Dependency Injection, LINQ, RESTful APIs, Authentication & Authorization, Two-Factor Authentication (2FA),Blazor, ASP.NET MVC

Databases & Persistence:
SQL Server, MySQL, Entity Framework Core, Relational Database Design, Normalization

Web & UI:
HTML, CSS, Responsive Design, UI/UX Fundamentals

Frontend,React and UI:

Responsive Design, UI/UX Fundamentals HTML, CSS, JavaScript, REST API, Tailwind CSS, Shadcn UI, MerakiUI, design libraries,Axios for HTTP, TanStack Query hooks for fetching, caching, and syncing State management with Redux and Zustand, React patterns like useEffect Forms and validation, React Hook Form, Zod Cookies, tokens, localStorage, auth aware UI patterns

DevOps & Tools:

Git, GitHub, Docker, Agile Development, Visual Studio, SSMS, VS Code, Pull-Requests,Vercel,Azure

AI and Modern Tooling:

Building AI powered apps with API based model integration and key handling OpenAI, ChatGPT, Claude, Gemini, Google AI Studio, Lovable Rapid UI and product workflows, Flames Blue website design tooling

Team Delivery and Project Leadership:

GitHub Projects, issues, tasks, features, milestone based delivery Agile execution, Kanban, sprint planning, retrospectives Project lead and Scrum leader experience, task splitting, team coordination

Quick Keywords for ATSTeam:

.NET Core, ASP.NET, Minimal API, CQRS, MediatR, EF Core,

LINQ, SQL, JWT, Identity, RBAC, FluentValidation,

React, Tailwind, TanStack Query, Redux, Zustand,

React Hook Form, Zod, CI CD,

GitHub Actions, Azure, Vercel, Netlify, Prisma, Supabase, OpenAI API

Work Experience

Project Leader— InFiNet Code

2026 – Present

- Leading sprint planning, daily stand-ups, and retrospectives.Troubleshoot deviations and drive continuous process improvements
- As the project leader I bridged the gap between technical engineering teams and non-technical stakeholders, ensuring all solutions strongly aligned with strategic business objectives.Coordinated daily operations and developed team performance
- Proactively identified project risks and implemented mitigation strategies, ensuring high system reliability during critical deployments.

Full-Stack Developer— Devotion Ventures

2026 – Present

- Designed, developed, and maintained scalable end-to-end web applicationsTroubleshoot deviations and drive continuous process improvements

- Refactored legacy codebases to modern framework standards, significantly improving maintainability and reducing technical debt.
- Elevated code quality by writing unit tests, participating in code reviews, and streamlining CI/CD pipelines for faster, more reliable deployments.

Machine Operator/Team Leader - Volvo Cars

2018 – Present

- Ensure production quality and stable operational flow in automated manufacturing
- Troubleshoot deviations and drive continuous process improvements
- Led high-volume production team focused on quality, safety, and performance
- Coordinated daily operations and developed team performance
- Performed component assembly in lean production environment (5S, LEAN)
- Maintained high quality and delivery precision

CEO & Founder — HB Luxury Auto Detailing

2022 – 2024

- Founded and scaled a profitable premium service business
- Led strategy, operations, and customer relations

Board Deputy Member — Casa Domini AB

2018 – Present

- Support strategic governance and board-level decision making
- Manage and maintain the organization’s website and provide general IT support

Software Projects

NexaPay — Digital Payment & Wallet Platform

Designed a secure and scalable full-stack platform for managing digital transactions and user accounts.

- Modeled a robust Domain-Driven Design using Clean Architecture to ensure strict separation between core business logic and infrastructure
- Applied CQRS and the Repository Pattern to optimize database queries and guarantee reliable handling of transactional data
- Implemented **user management with role handling and Two-Factor Authentication (2FA)**
- Architected a decoupled, distributed solution with distinct repositories for backend and frontend, enabling independent development and CI/CD
- Created modules for **budgeting, statistics, and analytics** using LINQ-based data processing
- Implemented a modern, responsive user interface with real-time API integrations to provide a seamless checkout and wallet experience

Tech: C#, .NET, LINQ, JSON, OOP, SOLID, React, TypeScript, Clean Architecture, CQRS, SQL Server, JWT, TDD, AutoMapper, FluentValidation, MediaR, NUnit,Postman, Core Identity

---

Onio.se – AI – Driven Housing Association

Designed a comprehensive full-stack platform for housing associations to centralize issue tracking and communication.

- Modeled a secure, **multi-tenant database architecture** to isolate data across different associations, board members, and residents
- Applied **modern frontend paradigms** to build intuitive, responsive dashboards for both residents and board administrators
- **Implemented robust backend services and APIs** to handle complex business logic and AI-assisted workflow
- **Designed a scalable full-stack solution ensuring reliable performance and seamless data synchronization**

Tech: C#, .NET, React, TypeScript, Supabase, SQL Server, JWT

Jarvis —Ecosystem Assistant App

Designed a centralized productivity platform seamlessly integrating major ecosystems Google and Microsoft.

- **Designed a responsive, unified frontend dashboard that allows users to interact with all their connected services from a single interface**
- Data synchronization by connecting directly with services like Outlook, Teams, Google Workspace, and Calendars
- Applied Clean Architecture principles to decouple external API dependencies, ensuring robust and maintainable integration code while following clean Architecture principles
- **Modeled a secure authentication flow utilizing OAuth 2.0 to safely authorize and manage access across multiple third-party providers**

Tech: C#, .NET, LINQ, JSON, OOP, React, TypeScript, Microsoft Graph API, Google APIs, OAuth

---

Eventify — Database Event Booking System

Built a production-style event booking system with the database as the single source of truth.

- Designed and implemented a fully **normalized SQL Server schema with strict constraints and relational integrity**
- Wrote advanced **SQL queries to filter events, customers, and ticket purchases across multiple relations**
- Implemented **full CRUD flows** and real-world ticket purchasing logic
- Scaffolded **a .NET Console Application using Entity Framework Core (Database First**)
- Built **an interactive admin console for managing events, customers, and ticket sales**
- Structured the project with **clean SQL scripts, clear separation of concerns, and professional GitHub workflow**

Tech: SQL Server, (JOINs, FK, Constraints), C#, Entity Framework Core

---

SalaryCoach — AI-Driven Salary Negotiation Assistant

Built an intelligent salary negotiation tool that helps users craft data-driven and persuasive compensation discussions.

- **Developed a modern Blazor application using .NET 8 with a clean and responsive UI**
- **Integrated OpenAI to generate tailored, professional salary negotiation scripts**
- Implemented validations to customize negotiation strategies based on role, experience level, target salary, and company context
- Designed the user interface with **MudBlazor** for consistent styling and intuitive interactions
- **Applied secure configuration and API key management**
- **Structured the project with clear separation of concerns and a professional GitHub workflow**

Tech:.NET 8, Blazor Server, C#, MudBlazor, OpenAI API, GitHub

---

Education

.NET System Developer — NBI Handelsakademin, Gothenburg

Languages

- Swedish — Native
- English — Fluent
- Bulgarian — Native

Career Goals

To grow into a professional software engineer specializing in backend and fullstack development, contributing to high-quality systems while continuously improving architecture, performance, and maintainability.
